MBP Solutions in brief

MBP Solutions is a world leader in the collection, handling, processing, production and application of biological by-products and related services.

Our focus

MBP Solutions Ltd. is a world leader in the collection, handling, processing, production, and application of biological by-products and related services. Since the beginning, we have focused on the optimal use of residues through the development of innovative by-product solutions, with an open book approach to incorporating full traceability.

In order to add value to by-products collected and managed, we seek to understand them from a technical-chemical point of view through sampling and analysis. We combine this data with expertise about technical requirements in different areas of application, along with knowledge about legal requirements and restrictions in different geographical markets. We do monitoring, sampling, analysis, logistics, sales, marketing and registration with authorities. When required, we also make the necessary arrangements for storage, cleaning, filtering and the addition of additives and repackaging.

Our services

We offer a wide variety of specialist services, including by-product and waste collection and handling, as well as a world-leading by-product management outsourcing service (OMBP). We focus on managing by-products from a production based on biological (non-fossil) raw materials and provide solutions for multiple industries, ranging from the oleochemical, biodiesel and omega-3 refining industries to companies that have other types of solutions, sludges and powders, such as breweries, starch manufacturers, pharmaceutical companies and manufacturers of nutritional ingredients.

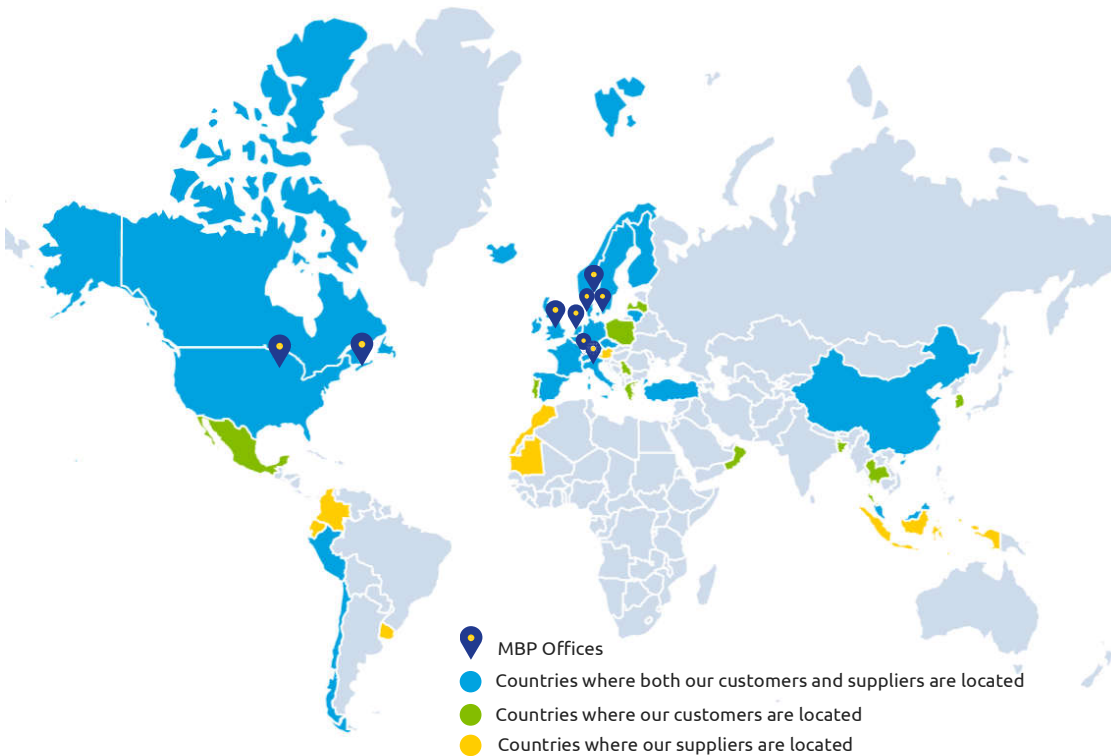

Our products

We offer a wide range of products including biofuels, bioliquids, substrates for biogas production, soil improvement products, high-quality animal feed and pet food products, in addition to specialist technical products for a wide range of applications.

In order to document the sustainable status of our products, we embrace relevant existing sustainability standards through certifications like ISCC, RSB, GMP+ MSC Chain of Custody and IFFO RS.

MBP in the world

Today MBP Solutions has become a world leader in the collection, handling, processing, production and application of biological by-products and related services.

Headquartered in Switzerland, MBP Solutions employs over 90 professionals; has offices in nine different countries; sells products in more than 50 countries; and handles over 200,000 tonnes of biological waste every year for a diverse range of clients, from manufacturing industries within food and beverage, biodiesel, oleo-chemical, pharmaceutical, omega-3 concentration and other industries using biological raw material.

Helping to reduce mankind's impact on the environment by turning one industry's by product into another industry's raw material.

MBP in 2019

Scope of the report

This report focuses on our performance, challenges and opportunities in 2019, and it covers MBP's entire organisation, including administrative offices, industrial facilities and sourcing operations.

This report meets the requirements for the UN Global Compact Communication on Progress, and it is available in English on our website www.mbpsolutions.com.

Our business brings to life the concepts of industrial ecology and the circular economy by materializing the idea that the waste of one industry can be used as a key resource by another.

CEO Statement

Sustainability has been part of our ideological backbone since the beginning. We are committed to bringing to life the concepts of **industrial ecology** and **circular economy** by materialising the idea that the waste stream of one industry can be used as a key resource by another, thereby offering products and services which are beneficial to the environment, people and the economy. We can contribute to at least 11 of the 17 SGD's goals through these product and service.

I am pleased to reaffirm MBP's support to the Ten Principles of the UN Global Compact in the areas of Human Rights, Labour, Environment and Anti-Corruption. In this annual Communication on Progress, we describe our efforts to gradually integrate the UN Global Compact and its principles into our business strategy, culture and daily operations, and we commit to sharing this information with our stakeholders using our primary channels of communication.

HELEN SAINSBURY
CEO
MBP Solutions Ltd.

Sustainability

Making industries more sustainable since 1999

MBP Solutions was founded in 1999 by the current Chairman, David Magnussen, who early on recognized the increasing importance of traceability and rigorous quality control for the strategic use of by-products. Our technical expertise, market knowledge and legal understanding help other companies to efficiently use resources, reduce waste and toxic emissions, cut operating costs and generate new revenue.

Sustained growth over 20 years

In 2019, we celebrated MBP's 20th anniversary as the world-leading provider of solutions for biological by-products. Throughout these 20 years, we have helped our suppliers and customers to improve their sustainability performance through the recycling and recovery of residual resources, while contributing to global goals such as the reduction of waste and the efficient use of resources.

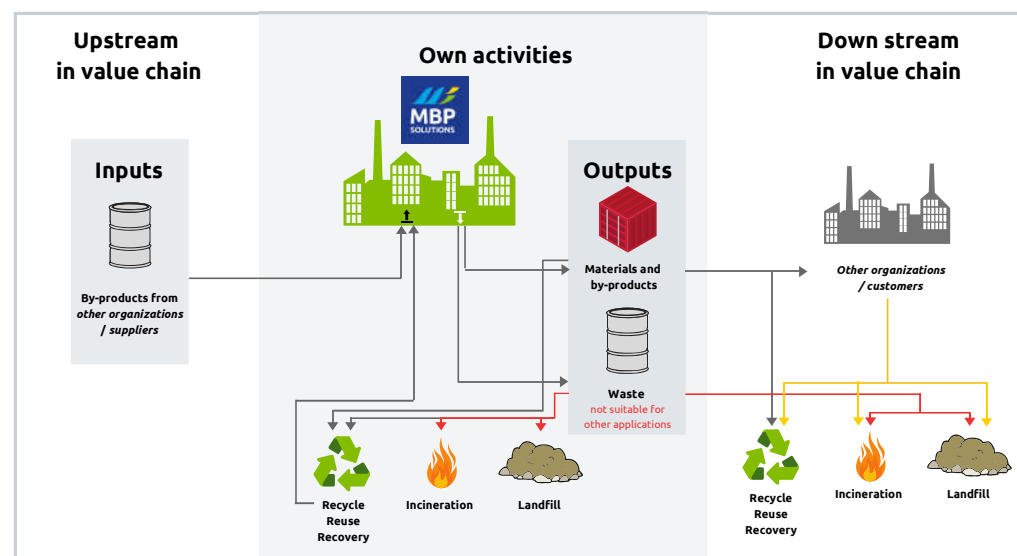

We are proud of our ever-growing business relationships and the diverse network we have built, and we will continue enhancing our expertise to support the sustained growth of our business based on turning one industry's by-product into another industry's raw material.

Advancing the circular economy in our supply chain

The degradation of the world's natural resources caused by human activities has created the need to move from a linear model of production and consumption to one that maintains the highest utility and value of products, components, and materials at all times. The circular economy model was born from this ambition, and it entails the reduction of waste, the use of waste as a resource when possible and the implementation of holistic and sustainable waste management approaches.

Our company encourages sustainable production and consumption patterns that help bring the concept of the circular economy to life. The manufacturers and service providers constitute our suppliers, who send out residues for recycling or recovery purposes. Then, we either find direct applications for those residual resources or reprocess them into products, and our customers either use them to replace materials (recovery) or use recycled resources through the purchase of MBP products (recycling).

These synergies facilitate the use of Earth's limited resources in a way that minimises its impacts on the environment while delivering greater value with less input. As a result, our suppliers and customers generate less waste, reduce business costs, earn economic benefits, reduce risks to public health and the environment, and ultimately, contribute to complementary policy areas such as the **green economy**, **innovation for sustainability** and the **circular economy**.

Partnership for better management of residues

Our company facilitates working in partnership to enable resource efficiency through the recycling and recovery of waste. We help our suppliers and customers minimise negative impacts on the environment and human health, by safely, responsibly and efficiently maximising waste recycling, recovery, and resource generation opportunities whilst ensuring legal compliance.

Suppliers

We provide solutions for by-product management and expertise to industries that prefer to focus on their core products. These are our suppliers, who are mostly companies involved in the omega-3, fish meal, oleochemical, food, beverages, feed, pharmaceutical, and nutritional supplements markets.

Customers

Based on product knowledge as well as know-how about the technical requirements for raw material in various sectors and applications, we provide customers with cost-efficient and sustainable products and raw material substitutes in the areas of biofuels, technical oils, animal feed, fertilisers and anaerobic digestion substrates.

MBP's by-product management approach

We take huge pride in identifying products that are normally considered as waste or a residue from production, and by understanding their potential, we find its optimal application.

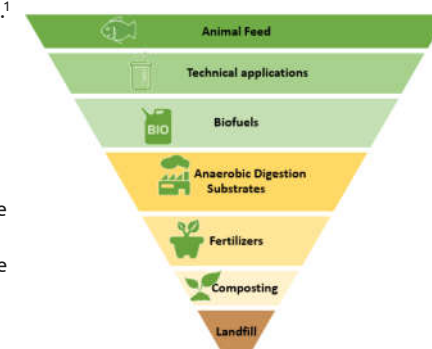

By these means, we not only help to reduce the waste generated in society but also the consumption of primary raw materials, as our by-product-based products will often substitute materials of the primary production sector.

By-product management hierarchy

Although we predominantly deal with by-products, our business operations fall into the waste management sector for the reason that, in general terms, we handle residues and remaining materials from industrial processes. Hence, we have aligned our by-product management approach with the waste management hierarchy established by the parties to the Basel Convention, the food waste hierarchy of the Global Waste Management Outlook, and other relevant internationally and nationally recognised standards for environmentally sustainable waste management approaches.¹

Attending to technical, environmental, economic, and legal aspects, we apply this hierarchy when finding the most suitable applications and customers for the by-products collected and managed.

Landfilling is our last option for dealing with residues, and we do our best to divert waste to composting or anaerobic digestion when possible, as these applications allow us to use gases and the same time avoid GHG emissions from waste disposal.

¹ The waste management hierarchy and food waste hierarchy set out the preferred order of handling practices, from most to least preferred, to achieve optimal environmental outcomes. See further: Global Waste Management Outlook (2015).

Our corporate sustainability frameworks

MBP's sustainability policies, strategy, culture and day-to-day operations are grounded on the UN Global Compact principles, the SDGs, our supply chain needs, and our principles and values.

The United Nations Global Compact

The UN Global Compact is the world's largest corporate sustainability initiative, which offers a framework for businesses stating ten principles in the areas of human rights, labour, environment and anti-corruption. We joined the UN Global Compact in November 2017, and as a signatory, our company is committed to supporting and integrating the ten principles as part of our strategy, culture and day to day operations. In this report, we describe our company's performance during our second period of commitment and we express our continued support for this initiative.

WE SUPPORT

The Sustainable Development Goals

The Sustainable Development goals (SDGs) are a set of 17 goals supported by 169 detailed targets that represent a clear agreement on where the world needs to be by 2030 to guarantee human wellbeing in the long term.

They were adopted in September 2015 by the 193 members of the United Nations, and they reflect economic, social and environmental expectations as well as future policy direction at the international, national and regional levels.

We believe that the SDGs impact our business and that our company can impact the achievement of the SDGs. Thus, we have committed to fully integrating the SDGs into our strategy and to joining global efforts to achieve these goals.

Our sustainability policies

Guided by our values and working in partnership with our team members, customers and suppliers, we strive to deliver sustainable by-product management solutions for the advantage of the community and the environment where we operate. Through the following policies, we reflect our commitment to ensuring that sustainability is considered through all our business decisions.

Economic policy

At MBP, economic sustainability means operating our company responsibly and thoughtfully to maximise shareholder return while wisely managing environmental, economic and social risks and opportunities. A good economic sustainability practice is key for our business because, without it, our company will not succeed in the social and environmental aspects of sustainability. Like most companies, we aim not only to survive but also to develop more profits and improve our position compared to competitors in the market. Therefore, we work to grow by embracing a business model that creates value for shareholders and investors through the pursuit of profitability, financial strength, adaptability and long-term resilience.

We intend to achieve this through constant development and improvement and by maintaining an excellent relationship with employees, suppliers and customers. We will constantly work to ensure the best planning decisions and use the best technological solutions to be able to continue offering high value-added products and services, meet the expectations of our employees, suppliers and customers, and create long-lasting economic, environmental and social value in the industries and geographical areas where our company operates.

We are committed to using different strategies for the efficient use of our resources to guarantee the company's profitability and long-term survival in a responsible way.

Environmental policy

These are the principles that have always inspired the MBP's approach to environmental sustainability:

- We shall strive to add value to waste and by-products in order to reduce the negative impact that these streams may have through landfilling or other types of disposal. At the same time, we will reduce the consumption of primary resources by substituting primary raw material with value-added by-products.
- We prioritise good housekeeping and the preservation of natural resources to contribute to a sustainable society.
- We will always comply with the environmental requirements imposed by current legislation and regulations.
- Environmental work is an integrated and natural part of our daily work.
- Our environmental management system drives a way of working in which we constantly strive to develop and improve ourselves.
- We work towards making employees, customers and suppliers aware of general environmental issues and the issues which apply specifically to the products we manufacture.
- Our product development work views the product from the perspective of its entire life cycle and seeks solutions with a low impact on the environment.
- The environmental aspects are always taken into account when investing in production equipment and production methods.

Our sustainability policies

Human rights policy statement

MBP Solutions Ltd. is committed to conducting business responsibly and ethically. Our human rights policy statement is based on the three documents collectively known as the International Bill of Human Rights (the Universal Declaration of Human Rights, the International Covenant on Civil and Political Rights, and the International Covenant on Economic, Social and Cultural Rights), along with the International Labour Organization's Declaration on Fundamental Principles and Rights at Work.

This Human Rights Policy Statement consolidates our commitment to respect international labour and human rights to the fullest extent possible and supports our efforts to integrate better a human rights approach into our business practices. Our commitment is reinforced by our involvement in voluntary business initiatives like the UN Global Compact, and it is consistent with our goal to enrich our workplace, work in partnership with our supply chain, protect the environment and respect the communities where we operate.

We believe in our responsibility to respect and support internationally proclaimed human rights, and we will constantly strive to make sure that we are not complicit in human rights abuses of any individual we are in contact with directly or indirectly. We will seek to avoid instigating or contributing to unfavourable human rights through our own activities, products and services and address their effects if they occur in a timely and appropriate manner.

We believe everyone should be treated fairly regardless of their race, gender, economic status, ethnic background, sexual orientation, age, political beliefs or any other comparable characteristics, and therefore we prohibit discrimination, harassment, forced labour and child labour.

We draw on internationally recognised labour principles and comply with applicable labour and employment laws in all the countries where we operate, to ensure that we are not interfering with the enjoyment of the rights conferred by national laws and international declarations.

We are committed to protecting the health and safety of our people at work and provide fair wages and benefits, as well as encourage development opportunities and continuous learning for our workers. Where national legislation is stricter or conflicts with our approach, we will complement our policy with local requirements and follow the United Nations' Guiding Principles on Business and Human Rights (UNGPs). This statement applies to our internal stakeholders in all locations where we conduct business. We will implement human rights due diligence into our operating model as suitable, instruct our team members to comply with this policy, establish appropriate reporting procedures and provide proper preventive or corrective action. We expect the same adherence to human rights from our external stakeholders, and we will regularly look for ways to support the promotion of human rights within our scope of operation and influence.

Our sustainability performance 2019

Areas assessed

This report offers an overview of MBP's approach to various aspects of sustainability. Hence, this section presents the results of our assessments in three areas:

1. UN Global Compact Principles (pages 15 to 19)
2. Our focus areas: goals & targets (pages 20 to 25)
3. Our CSR scorecard 2019 (page 26)

Integrating the SDGs

Our company is aware of the links that the UN Global Compact principles and our goals and targets have with the SDGs. We recognise the importance that all the SDGs have to our business, and we have measured our corporate sustainability performance in connection to our impact on the 17 SDGs.

Status guidelines

We used a stoplight approach to monitor the status of our performance on each of the areas assessed:

- On track
- At-risk
- Attention required

A green status colour indicates on-target performance or compliance. Yellow indicates poor performance that may impact long-term goals or compliance, and red indicates below-target performance or underlying critical risks.

In addition to reporting our performance through the stoplight approach, we provide a quick note about relevant progress achieved in 2019 and our planned improvements on some of the areas assessed.

UN Global Compact Principles

As a signatory to the UN Global Compact, we measured our corporate sustainability performance in connection to the UN Global Compact principles and the SDGs, and compared it with our performance on last year to keep record of any changes.

➤ Principle 1: Support and respect the protection of human rights

Areas	Health and safety	Hours, wages and leave	Fair treatment
2018	●	●	●
2019	●	●	●
Our contribution to the SDGs	 Target 8.8. Safe and secure working environment	 Target 8.5. Full, productive and decent employment	 Target 16.1. Reduce all forms of violence
Progress achieved 2019/ Planned Improvements 2020			We have allocated resources in our budget for 2020, to provide training to our managers on anti-harassment issues

➤ Principle 2: Make sure that they are not complicit in human rights abuses

Areas	Product stewardship	Country risk	Community impacts
2018	●	●	●
2019	●	●	●
Our contribution to the SDGs	 Target 16.7. Inclusive, participatory and representative decision-making at all levels		
Progress achieved 2019/ Planned Improvements 2020			

➤ Principle 3: Uphold the freedom of association and the effective recognition of the right to collective bargaining

Areas	Association and bargaining
2018	●
2019	●
Our contribution to the SDGs	 Target 8.8. Protect labour rights

➤ Principle 4: The elimination of all forms of forced and compulsory labour

Areas	Forced and compulsory labour
2018	●
2019	●
Our contribution to the SDGs	 Target 8.7. Eradicate forced labour and end modern slavery

➤ Principle 5: The effective abolition of child labour

Areas	Child labour and young workers
2018	●
2019	●
Our contribution to the SDGs	 Target 8.7. Prohibition and elimination of child labour

➤ Principle 6: The elimination of discrimination in respect of employment and occupation

Areas	Discrimination
2018	●
2019	●
Our contribution to the SDGs	 Target 10.3. Equal opportunities and reduced inequalities
Progress achieved 2019/ Planned Improvements 2020	In 2019, we established our non-discrimination and equality policy. This policy defines MBP's approach to monitoring and eliminating discrimination in employment. It has been added to our Employee Handbook, and it is now one of our policies (applying to all employees and consultants)

➤ Principle 7: Support a precautionary approach to environmental challenges

Areas	Precaution	
2018	●	
2019	●	
Our contribution to the SDGs		Target 12.2. Sustainable management of natural resources

➤ Principle 8: Undertake initiatives to promote greater environmental responsibility

Areas	Responsibility and performance	
2018	●	
2019	●	
Our contribution to the SDGs		Target 12.6. Sustainable practices and sustainability reporting
Progress achieved 2019/ Planned Improvements 2020	We conducted our first materiality assessment in 2019. We will select key performance indicators for our material topics in line with internationally recognised standards in 2020	

➤ Principle 9: Encourage the development and diffusion of environmentally friendly technologies

Areas	Technology	
2018	●	
2019	●	
Our contribution to the SDGs		Target 9.4. Environmentally sound technologies and industrial processes

➤ Principle 10: Businesses should work against corruption in all its forms, including extortion and bribery

Areas	Company culture and procedures	Joint Actions
2018	●	●
2019	●	●
Our contribution to the SDGs		Target 16.5. Reduce corruption and bribery in all their forms
Progress achieved 2019/ Planned Improvements 2020	We have updated our code of ethics and our gift and hospitality procedure, as well as established a policy on anti-bribery and anti-Corruption. These three documents are distributed to MBP personnel with a link for an online 30 min Anti-bribery trainee course, which is also uploaded to our Human Resources Management System.	

Our focus areas, goals & targets

Our focus areas

Our commitment to sustainability is structured around four focus areas directly connected to our scope of business: promoting resource efficiency, enabling circularity, improving traceability and enhancing our expertise. Each focus area has long-term goals and specific targets that are closely monitored to fulfil our ambition of being the best in innovative management of biological by-products. Additionally, we have linked our focus areas to current global challenges and the SDGs to ensure that we are guaranteeing not only the sustainability of our company but also the sustainability of our planet.

Our goals and targets

Our goals are at the heart of our corporate sustainability approach, and they mirror our plan for competing successfully, optimising our financial performance and achieving the company's vision while contributing to the environmental, social and economic resilience of the industries and communities where we operate.

On the pages below you will find information on our performance in 2019 as well as the interlinkages between our focus areas, our goals, our targets and our contribution to the SDGs.

Our focus areas

Promoting resource efficiency

Enabling circularity

Improving traceability

Enhancing our expertise

Global challenges & ambitions addressed

Resource scarcity: The decreasing availability of fishmeal and fish oil for marine ingredients will force the animal feed industry to depend more heavily on by-products for fish feed

Circular economy: In a circular economy, the aim is to close the loops, and any materials taken from nature should be used not only efficiently but also for as long as possible

Supply chain transparency: Administering data and increasing transparency are powerful tools for managing risks, grasping opportunities of global supply chains and contributing to sustainable development

Compliance requirements: Our global economy has produced opportunities for the international expansion of companies that come with an increased need for governance, oversight and formal corporate compliance

Our goals

1. Maintain our position as the preferred partner for handling by-products from the Omega-3 fish oil industry worldwide

2. Develop more long-term agreements for the strategic management of by-products (known as OMBP agreements)
3. Make countrywide contracts for Used Cooking Oil (UCO) collection and handling

4. Ensure a better system for storing and retrieving information about customers and suppliers
5. Implement a management model to secure that all employees and partners are working together in a defined direction
6. Improve our quality control system

7. Improve our legal, commercial and product understanding
8. Secure MBP's long-term recruitment of personnel with key competencies

Our targets

1.1. Upgrade 20'000 tonnes of distillation fish oil by-products from biofuel to animal feed per year

2.1. Grow OMBP sourcing volume with 15% each year
3.1. Increase the volume of UCO handled with 10-15% per year in Denmark, Norway, Sweden and Finland

4.1 Implement the use of a customer relationship management (CRM) system by 2019
5.1. Integrate Corporate Sustainability into our Management Model by 2020
6.1. Maintain existing certifications and obtain additional certifications of relevance for our products and services

7.1. Improve MBP's expertise in different industries and countries
8.1. Maintain employee satisfaction and engagement

Our contribution to the SDGs

Promoting resource efficiency

Goal 1

Maintain our position as the preferred partner for handling by-products from the Omega-3 fish oil industry worldwide

Target

Upgrade 20.000 tonnes of distillation fish oil by-products from omega-3 concentration from biofuel to animal feed per year

Achievements 2019

We achieved ca. 10'000 t in the 12 months ending 30 November 2019

Planned improvements 2020

We have a number of initiatives that will allow us to grow this number significantly in the next 12 months. Increased volume in existing OMBPs and a number of potential new suppliers are in the pipeline. More traceability information on fish oils from suppliers. Sustainability certifications GMP+, MSC and IFFO-RS with key suppliers and MBP will drive more demand for animal feed

Progress

10'000 T

OF DISTILLATION FISH OIL BY-PRODUCTS FROM OMEGA-3 CONCENTRATION UPGRADED FROM BIOFUEL TO ANIMAL FEED in the 12 months ending 30 November 2019

Our contribution to the SDGs

Enabling Circularity

Goal 2

Develop more long-term agreements for the strategic management of by-products (known as OMBP agreements)

Target

Grow OMBP sourcing volume with 15% each year

Achievements 2019

OMBP volume grew 20% in 12 months ending 30 November 2019

Planned improvements 2020

MBP is focusing on the OMBP concept. Improving marketing and our communication about the OMBP concept. We are dedicating a larger share of key employees' time to engage in dialogue with potential OMBPs

Progress

360° solutions

30 Factories are relying on MBP to manage their by-products

Goal 3

Make country-wide contracts for Used Cooking Oil (UCO) collection and handling, as well as consolidation agreements with smaller collectors

Target

Increase the volume of UCO handled with 10-15% per year in Denmark, Norway, Sweden and Finland

Achievements 2019

Used Cooking Oil sold volume grew 19% compared to last year

Planned improvements 2020

We are working on improving collection efficiency, reducing fuel consumption per tonne collected and improving collection logistics planning and execution

Progress

Our contribution to the SDGs

Improving traceability

Goal 4

Ensure a better system for storing and retrieving information about customers and suppliers

Target

Implement the use of a customer relationship management (CRM) system by 2019

Achievements 2019

After a start with a pilot test in the animal feed group, the CRM system was rolled out in the whole group during 2019 and all sales are now covered

Progress

Goal 5

Implement a management model to secure that all employees and partners are working together in a defined direction

Target

Integrate Corporate Sustainability into our Management Model by 2020

Achievements 2019

We conducted our first material assessment with internal stakeholders in 2019

Planned improvements 2020

We are planning to select key performance indicators for our material topics in 2020

Progress

Our contribution to the SDGs

Enhancing our expertise

Goal 6

Improve our quality control system

MSC & IFFO-RS

In 2019 we achieved a chain of custody (COC) sustainability certification for MSC and IFFO-RS

Target

Maintain current certifications and obtain certifications of relevance for products & services

Achievements 2019

In 2019 we achieved a chain of custody (COC) sustainability certification for MSC and IFFO-RS, which allows us to meet the highest requirements in the aquafeed industry for ASC. All other certifications were successfully maintained (ISCC, RSB, GMP+, ISO 9001 and ISO 14001)

Progress

Goal 7

Improve and standardise our legal, commercial and product understanding

Target

Improve our expertise in gathering and understanding legislation and commercial knowledge

Achievements 2019

MBP has decided to move to MS Office 365 for information management. The use of MS Sharepoint and MS Teams is expected to improve the communication and information sharing. MBP maintains memberships of a number of relevant national and international professional forums and keeps record of new legislation enacted

Progress

Goal 8

Secure MBP's long-term recruitment of personnel with key competencies

Target

Maintain employee satisfaction and engagement

Achievements 2019

30% of our employees would enthusiastically recommend MBP as a place to work, 25% improvement compared to previous year, as revealed by the employee satisfaction survey results. In 2019 we achieved an employee Net Promoter Score eNPS equal to 0, compared to -18 in 2018

Progress

Our contribution to the SDGs

Our sustainability rating

Sustainability ratings are gaining growing relevance in the corporate sustainability world. They evaluate how well a company balances economic, environmental and social values and performance to measure the overall quality of its sustainability and Corporate Social Responsibility (CSR) management system.

To strengthen the transparency of our company, we use one of the world's most trusted methodologies: the EcoVadis CSR rating. This year EcoVadis has awarded the Gold Medal to MBP, a significant improvement over last year's Silver status, placing us in the top 7% of all companies evaluated by EcoVadis. This recognition demonstrates MBP's high competence in important corporate sustainability areas such as Environment, Labor Practices & Human Rights, Fair Business Practices and Sustainable Procurement.

This is great news not only for our company but also for our suppliers, customers, employees and partners, as it gives them the security that they are working with a company that operates in a responsible manner with the planet, the people and the economy.

Reporting criteria

This is our second UN Global Compact communication on progress, and we intend to continue reporting on an annual basis. For this reporting cycle, we evaluated our company's performance on the four areas of the UN Global Compact through the Global Compact Self Assessment Tool and identified our impact on the SDGs based on the Business Reporting on the SDGs: An Analysis of the Goals and Targets developed by GRI and UN Global Compact.

Additionally, we carried out our second CSR assessment through **EcoVadis**, and we hired specialised consultancy services to help us with the integration of sustainability into our corporate strategy, processes, and model.

The results of these internal and external assessments enabled us to assess our status and progress and laid the groundwork for the communication of our performance and engagement on this report. Yet, we are committed to continue identifying areas of development and to constantly improve our disclosure in line with emerging frameworks for sustainability reporting.
